It's always fun to learn about dinosaurs no matter what your age. My SO and his friends actually went through this at a get together. They mostly liked it and the adults and adults with kids had similar comments.

An issue is that sometimes terms aren't defined within the story and they needed to be, like sauropod.

Everybody liked the illustrations and a few of the more artistic guys drew their own version. This would be a fun thing for kids to do too.

Everybody wanted a chart at the end to easily see which dinosaurs lived at the same time.

There's a number of interesting facts in here that captured their imagination. Each dinosaur has a picture and several pieces of information. One parent there has a boy that loves dinosaurs and the book was a huge hit, giving some info he didn't already know. He made a map to show where each dinosaur lived.

The other thing people wanted was a pronunciation guide because several of these are quite a mouthful.

I did receive this at a free or discounted price in exchange for my honest review

This book is full of interesting facts and drawing of the awesome creatures we call dinosaurs. Since we will never see on in person this gives a view of what they may have looked like and how they lived. The kids enjoyed it!
