It is said that the perfect yogi can relinquish his body at death and journey, at the speed of mind, to antimaterial planets far beyond the limits of the material universe. It starts very well. But it turns confusing and it's difficult to understand with no other references. Anyway, it has some interesting ideas.

I felt that a single point was repeated again and again in the entire book. It could be far more intriguing.

This book was interesting but it wasn't what I would call well written. Maybe they had trouble with the translation and that would explain some of the problems this book has, but it doesn't explain all of them.

The author engaged in some wordplay regarding anti-matter vs non-matter (meaning non material), and while he obviously knows the difference he kept mixing up the terms in what sounded like a self-gratifying and immature attempt to poke fun at western science. I'm sure he knows better so while I'm only guessing at his motivation in mixing up the terms even after explaining the difference I can't think of a good reason for him to have done this.

In some places he sounded similar to Edgar Cayce when discussing life on other planets, and he included some interesting quotes from the Bhavagad Gita and other old texts. So if you don't know anything about A.C. Bhaktivedanta Swami Prabhupada or his beliefs this might interest you. But if you are looking for a quick way to visit other planets his advice is to find a qualified yogi and do whatever he says for as long as he says and then eventually maybe you will be able to do that. So the title is misleading, self-serving, even false advertising. I won't be reading anything else by this guy.

Unbelievably terrible book. Written by an idiot.

"... one should learn to discern the existence of supreme intelligence behind all these material manifestations."

Newspaper headlines read, "Man's First Steps on the Moon", but the reporters do not know that millions and millions of men went there and came back. This is not for the first time. This is an ancient practice. In the Bhagavad Gita(8.16) it is clearly stated, 'abrahma-bhuvanal lokah punar avartino arjuna:' "My dear Arjuna, even if you go to the highest planetary system, which is called Brahmaloaka, you will have to come back." Therefore, interplanetary travel is not new. It is known to the Krsna Conscious devotees.

The Krishna Consciousness system has so nicely been described in this book, in relevance with science and astronomy and then with Bhakti Yoga, for interplanetary travels and positioning oneself permanently in the Transcendental Adobe in a suitable Transcendental body.

Todd Bradley says

A monk gave me this book, and I decided to read the whole damn thing. It was a chore. The author claims to be a scientist, but doesn't understand what science is or how it works. Much of the book is essentially "here is what scientists say about space travel, but we can ignore that because the Bhagavad Gita already tells us everything we need to know." Sadly the "here is what scientists say" part is consistently wildly off base.

It's like the author read just a headline of a science breakthrough in a newspaper, but misunderstood the meaning. And then he argues against those details. So I found myself wanting to talk back to the author, saying "no, that's really not what scientists mean by subatomic particles" or "that isn't how the scientific method works" or "you clearly don't understand what the astronauts were trying to do."

This tiny book is basically a non-compelling advertisement for the author's translation of the Bhagavad Gita. I can't recommend it in any way.

Have a body? Feeling gross and heavy in the nether regions of your soul that has been calling to be feeler of this earthy, visceral, temporal planet? Then this book may be the one-way ticket to the All-Attractive One's universe!

All-in-all; pretty swell read.
